

Original keyboard connector CN1 is two 9-pin Molex male connectors, pins numbered 1-18

I am guessing at the connection between keyboard matrix (KI & KO) and actual connector pin ...

{Yes yes, the label directions are probably wrong & inconsistent, remind me later to sort out}

Original schematic shows two signals each for TAPE DUMP and TAPE LOAD. Are these shorted together?

Video Output: 75Ω load, 0-1V (white)

Audio Output: 1.5Vp-p

Tape Load (EAR): 500mVp-p
Tape Dump (MIC): 90mVp-p

Based on original schematics from BIT Corporation

Brett Hallen
